FCC - MAILROOM

nmipa New Mexico
**Internet Professionals
Association**

ORIGINAL

August 3, 2005

Commissioner Jonathan Adelstein
Federal Communications Commission
445 12th Street SW
Washington, DC 20554

Dear Commissioner Adelstein,

The New Mexico Internet Professionals Association wants to make you aware that the 160+ member companies of this organization are strongly opposed to the FCC's potential decision to deregulate DSL services. Our organization is composed of web designers, equipment dealers, journalists, technology coordinators, network engineers, systems and database administrators, scientists, graphic artists, teachers, professors, attorneys, marketing consultants, IT professionals, public servants, real estate professionals, accountants, public relations specialists, investment analysts, voice-over-IP providers, bankers, stock brokers, venture capitalists, librarians, medical personnel, economists, and Internet Service Providers (ISPs).

Deregulation of DSL services will significantly harm all of our business and our ability to provide competitive services to our customers. Consumers need and deserve the choices among Internet service providers they enjoy today. Deregulation will take away consumers' right to choose such providers and services.

President Bush signed Executive Order 13272 on August 13, 2002 requiring federal agencies to implement policies protecting small entities when writing new rules and regulations. President Bush' Small Business Agenda states that every new business starts with an idea for a better product or process, which has been the driving force of Internet innovation we enjoy today.

Innovative ideas become reality only when confident entrepreneurs are willing to take economic risks. ISP's have

repeatedly taken such risks. Small businesses are the heart of the American economy because they drive innovation. New companies are established on the very premise that they can do a better job and recognize that a one-size-fits all approach is not good for every organization.

President Bush has called for recognition that supporting America's small businesses is critical to ensuring continued job creation. Today, small businesses create two-thirds of new private sector jobs in America, employ more than half of all workers, and account for more than half of the output of our economy.

The FCC has been entrusted with protecting consumers, encouraging economic development, and ensuring that competition is allowed to develop, rather than being squashed by a deregulated monopoly. Already, we are seeing the former Bell phone companies move to increase prices. Without regulation, small business will be harmed, thousands of ISP's will be forced out business, highly skilled workers will lose their jobs and consumers will lose the choice of providers for broadband services and support.

Deregulation will be bad for everyone in this country. NMIPA encourages you to oppose the move to deregulate DSL services. A few legacy carriers, who have benefited from valuable government grants and licenses, the use of public rights-of-way, and decades of guaranteed profits, should not now be given the right to bar others from offering their services to the public.

Sincerely,

Marianne Granoff
Chairman, Public Affairs Committee
